"Moonlighting: Seasons One and Two"

Not rated

(Lions Gate)

It's been more than 20 years since Maddie Hayes (Cybill Shepherd) reluctantly kept the Blue Moon Detective Agency afloat, established potent sexual tension with wisecracking gumshoe David Addison (Bruce Willis, with hair), and began a quirky hit series on ABC.

And it's been more than two years since the pilot episode was released to **DVD**. So what's with the delay on this six-disc set? Show creator Glenn Gordon Caron reportedly didn't want to release the series without original music. Because rights were tied up along with corporate restructuring, it took awhile. Plus, he wanted to get Willis and Shepherd to take part.

He gets them for several episode commentaries, plus a two-part "story of **'Moonlighting'**" spotlight. Rounding out the package are more featurettes, deleted scenes, gags and bloopers, and a soundtrack remastered in Dolby Digital 5.1.
